React Assignment

E-Commerce

Create a simple e-commerce website using React v16 above and Redux. For UI design reference please check the images below. The website should be responsive and should work in all device resolutions, though you can use your own creativity for the responsive UI design. Follow all best practices and standards.

Points to consider:

- The **Home** screen should have minimum 20 books.
- Each book will have its **Detail** page and a **Buy Now** or **Add to Cart** Button.
- The Detail page of the item will have its picture, price, and features.
- Buy Now will quickly take the user to the **Checkout** screen while the Add to Cart Button will store the Book in the **Shopping Cart**.
- At the Checkout screen, the user can review the billing information and the list of items in the cart.
- A **My Orders** screen which will list all the books the user has bought till date.
- Unit test cases are a bonus point.

Tools which are highly recommended:

- JSON Server to mock book data.
- Typescript
- React Router
- Redux
- Redux Saga
